January 20 2023

MEMORANDUM: # 211

## **ASSESSMENT OF FRAUDULENT CONTRACTOR CLAIMS**

### **CHILD ABDUCTION TO IMPAIR SERVICES OF NORTEL NETWORKS**

No contract existed for future support of the product specified to be a local WAN-based reporting tool themed SSR (Sprint Services Report); a database parser. Bandwidth requirements were 10 mbps with Oracle RDMS back-end, then in experimental development with the PHP language and licensing issues later resolved by public adoption of PHP in public commercial use, MariaDB licensing issues, and ordinary enforcement aspects of a royalty-free scalable solution.

### **MID DEVELOPMENT CHANGES**

Late in development, the product was tasked with VPN access for 56Kbps access and oversold without change in written contract specifications to provide multiple nationwide clients access to such data; in real time. This is what happens when sales people go to meetings and represent 1099m contractors deliverables without reading the actual specifications document and design scope of the product sold.

### **Criminal claims to extort NORTEL Investors and SPRINT**

2003 September claims to suggest the disposal of such product for unfitness, never expressed at any billable time of a 1099m contract; appear to be "criminally designed false claims by TEK SYSTEMS EMPLOYEES" to conceal a secondary project tasked to the contractor to AUDIT a "TEK SYSTEMS" team and report made which was a "finding of fraud" by the TEK SYSTEMS employees.

The employees claimed they were developing a similar report to the SSR, and it was royalty free and scalable without cost, proprietary software, and entitled sale and sublicense by Nortel Networks.

The auditor (JAMES ALLEN) discovered that the team had purchased off-the-shelf API products with substantial cost to function as middleware, reporting these 3<sup>rd</sup> party products "As if they were in-house software developed and owned by NORTEL NETWORKS".

Because the project goal was to deploy an unlimited number of (originally localized report generators, exploiting database replication on the Oracle server to manage synchronizing changes to regions as is best practices at that time), the TEK SYSTEMS product was not fit for the specifications. Further, a memory leak which caused it to fault after a fixed interval, in the 3<sup>rd</sup> party API, was causing issues obligating this review to clarify why the alleged source code developers had not found and fixed the bug in the code allegedly sold in full to NORTEL". On discovery of fraud in product presentation, the report of such 3<sup>rd</sup> party software was delivered, and WIRELESS ENGINEERING was informed that the group responsible for the fraud had been liquidated. Over 80,000 employees were laid off with severance packages paid to some at that time, so this was relatively unnoticed and rudimentary work. No malice or thought to any false claims of employment by ALLEN were reported, either to him or to his agency (the correct channel for all lawful complaints, of record).

Sprint Services Report accomplished its goal, to restore \$2 million USD per month in billing refused payment due to a reliance on mail routing to handle requests and work tickets prior. An employee had left the firm, and tickets were piling up in that inbox despite no employee to answer them. On identification, the missing employee and job process was resolved, making the entire hiring profitable to NORTEL and resulting in a “vital employee” mark that prohibited release early from contact for JAMES ALLEN, as well as solicitation to rehire in violation of a global company HIRING FREEZE order.

It was reported that this budget was paid for despite the HIRING FREEZE by appropriating money from the copier repair fund for the campus, which was no longer in use due to the layoffs, affording a limited time to return to check on the product and speak with the developer assigned to “maintain” the application.

#### **DEVELOPER ASSIGNED UNQUALIFIED**

The VISA hire who was assigned to manage the SSR did not know PHP language beyond limited object oriented coding; and could not read the “very simple” data loops and structures in a monolithic design. Initially he complained there were not enough COMMENTS in the PHP code; but as most developers of a high level language know – the code is human readable at source and ordinarily does not require any COMMENTS to follow basic query, parse, print routines themed juvenile design for a report product.

#### **ERRORS EVIDENT IN INTERNAL PRACTICES**

Internally, the ORACLE system was maintained by another department, and mid-way through such work the database was re-ordered. This decreased speed and performance, a metric in design, and violated a written agreement in the specifications document not to alter the database or table structure; from which a period of work was required to modify the report to utilize relational database requests rather than serialized data. Data serialization and data structure is critical, and despite agreements – these were not performed as contracted by the Nortel group. While today we think nothing of a relational database call, at that time 200 MHz was considered “Fast”, and the overhead impacted the report speed. Today most computers run at 3700-5400 MHz, and servers at 2200-2700 Mhz by contrast.

The equivalent of this would be like parsing the database of all the customers and inventory and sku information for BEST BUY USA, along with all customer service tickets, on a cell phone cpu. Possible, but not ideal or efficient. It was a “stop-gap” product.

#### **STOP GAP MEASURES**

At the time of hire, NORTEL pledged they were hiring 30+ developers for a new WIRELESS ENGINEERING TOOLS DIVISION, whose goal was to “explore alternative server and language options” to avoid reliance on ORACLE JAVA platform – a decision that would later prove exceptionally wise in light of the failure and shortcomings of JAVA over 2001-2023. JAVA is still working, but PHP runs the Internet.

In fact, only 6 full time developers were hired for any period of time, and only JAMES ALLEN remained with an artist and a department manager overseeing such work. Eventually both stopped coming in, and accepted early termination severance packages, leaving JAMES ALLEN to run what was then the WIRELESS ENGINEERING TOOLS DIVISION. Originally on the 13<sup>th</sup> Floor, the group was moved to the 1<sup>st</sup> floor, and during ISO filing for business in Europe, a coke machine was “pushed in front of the door” to hide the room. “If anyone asks who you work for, tell them it is the Bank (down the hall).” Were the instructions -because apparently in the rush, the entire department was omitted from the ISO filing; and the company would be disqualified if this omission failing the ISO standards were disclosed. So, for 20 years, the omission was not disclosed. Even after the 2011 collapse of Nortel in Bankruptcy.

## **SECURITY BREACH**

During this time, James Allen noticed that security at the facility was poor. At one point, Veronica Marie Petersen entered the facility without challenge, and accessed the 13<sup>th</sup> floor, alleging she imagined he was having an affair at the office because he worked very late. These “magical ideas” were early indications of a more serious mental health issue, but revealed that Veronica Marie Petersen had prior worked for NORTEL NETWORKS, and left without returning her badge. She retained and used the badge to enter into the NORTEL facility and access the area, without successful challenge by the entry security, because she had never been properly removed from the system. Despite being a contractor; this exposed a terrible security practice that would later be critical to the failure of NORTEL.

It also explained how, on the final day, employees disgruntled with the layoffs absconded with the executive chairs from the board room, and rolled them out of the building past security as if they owned the place. On sitting, waiting to be picked up by Veronica Marie Petersen, who had the \$32,000 NISSAN MAXIMA car at that time and keys to the apartment at 2502 Live Oak St #335 Dallas TX, where she and her daughter and newborn son were living at the expense of James Allen; Allen observed an employee walking out with a full SUN MICROSYSTEMS workstation. Those machines were valued at \$10,000 USD or more; similar to the one he used at Sykes Enterprises. If not for the imminent threat and prior physical violence, prompting fear of abduction of his child threatened in prior domestic violence, he would have reported this suspected theft – but was unable to do so because he was focused on getting his son safely to Oklahoma where he had secured future employment to support the child, had housing and medical care waiting in the form of a pediatric practice and peers of the child’s grandmother CHARLYCE ANN KLEPPER, and family members with over \$5 million USD to assist should the child need anything in their relocation or early childhood care. Psychiatric care for domestic violence and family counselling had also been promised, on pledge of \$10,000 USD paid to TRINITY MEDICAL CENTER, to clear the debt of Veronica Petersen so she was in agreement to move the children at that time.

All claims to the contrary are fraud, and based on those claims the potential damage to NORTEL NETWORKS by the misuse of the badge and belligerent behavior of Donald Jonathon Beal in his then discussed operation of a 1/3<sup>rd</sup> of the LOSTSERVER.NET group with SENIOR SOFTWARE ENGINEER Jared Mauch and DIRECTOR OF IP ENGINEERING Dorian Kim of NTT COMMUNICATIONS – the largest competitor to Nortel Networks at that time, and their operation of CANADASUCKS.COM to harass and abuse Nortel in alleged “retaliation” for the “perceived slight” of terminating Veronica Petersen from her prior incomplete contract – begin to take focus.

Veronica Petersen was terminated for job abandonment, per her testimony to James Allen, so done out of shame because she became intoxicated at the Nortel job site and flashed her breasts at other coworkers who took photos. She alleged these photos were circulated among coworkers, resulting in her embarrassment and decision to stop going to that job after her poor decision, having refused to report the incident to HR or seek re-instatement supported by James Allen.

This conduct was later evident in images sent to James Allen showing Veronica with other men, in the nude in public places, including at an apartment complex in photos, and such photos made after the birth of her first child and prior to meeting James Allen or after she left the family home, taking the children to conceal outside the County aided by Iva Petersen and Donald Beal.

Based on such conduct and statements, no claims of Veronica Petersen are believed to be valid. Veronica Petersen also reported she had been terminated at a call center, and could not go back. This fraud was discovered when the call center telephoned and explained they were holding her job for her.

## **EMAIL CLAIMS IN 2002**

Claims that some contract or 1<sup>st</sup> birthday of the child were not attended, which is in May of 2002, are fraud.

The 7750 Willow Winds Court Building 24 #224 Dallas TX 75230 was destroyed by fire in early 2002, disruption and all Internet services were disabled during such event. Mail servers were offline, and no correspondence with Veronica Marie Petersen ongoing in that period of time as claimed by Donald Jonathon Beal in his 2003 September extortion letter to Elizabeth Peta May Botelho.

Restoration of servers in 722 S Haskell Ave, Dallas TX 75223, were initially impaired due to non-payment for a T1 data circuit; and such liability concealed from debts of "TERRABOX.COM CO" prompting a finding of incomplete books by Sarah Moore, the CFO retained to perform the certification for a securities offer by Brian Wolfe. This was witnessed by Michael Marino, the CEO retained who initially hired in good faith the SHADOWDANCERS L.L.C. company to lease such space and upon terms later broken by Brian Wolfe, including refusal to return property and abuse following the assault at gunpoint and carjacking against James Allen on the Southeast Side of the building on Garland Avenue.

Resort to suggest some "email correspondence" and civil relationship sought or maintained during such activity; are contrary all reality and a fabrication to kidnap the child. This is evident in the language and the use of the company names to abuse, defame, and commercially attack by inclusion of the legal name of the ALLEN companies in META DATA tags to harm their search engine placement by Donald Jonathon Beal under the legal name "Friends of Veronica Petersen and Don Beal", which incorporated the "jamesisalittlebitch" file as its header – communicating the genuine nature of such child concealment and extortion behind the disparaging language later adopted in the "mythology" created to justify the narcissistic grandiose delusion of "rescuing" the child from the "emotional abuse" of James Allen – and coordinating with other persons to steal the child away and conceal the child.

All of which the parties filed to the DALLAS COUNTY DISTRICT COURT as "abandonment" by ALLEN.

Whether Veronica Marie Petersen is simply an idiot, or Donald Jonathon Beal is an idiot, and the other party faked the emails used to suggest this was a real communication with the real father – no one knows. No email has been produced to suggest such claim signed with the PGP key of JAMES ALLEN, nor is it likely there will be as they do not exist.

More likely is that the entire "email correspondence" with James Allen and alleged written agreement to attend events, is a fraud to deceive the public; sustained over many years in a criminal plan by both abducting parties.

Specifically, Amy Snelgrove asked James Allen if he would like to attend an event at the park, and see his son – which was initially witnessed by Elizabeth Botelho. It was stated that invitation through a third party sounded practical, but was preceding threats describing assaulting and abusing James Allen at the park should he attend, also witnessed by Elizabeth Botelho, at which time the group decided not to participate in such activity due to public written violent threats. No direct or RSVP was or is necessary in such conduct, and the tone of such conduct is evident in threats which follow from Donald Jonathon Beal and Veronica Petersen false claims to conceal this activity and intimidate the clinical psychologist treating the child for resulting anger management issues in 2015 arising from his loss of all communication with his biological father under these violent and sustained conditions.

### **Duration of Fraud Exposes Criminal Malice and Forethought in Planning**

As of 2002-2004, the parties continued in commercial extortion of JAMES ALLEN jointly; and to harm all support for the child; to carry out a scheme of criminal entrapment and interference with the company in the State of Oklahoma from the State of Texas across State borders and on a Global scope of fraud.

In 2008, threats being sent to JAMES ALLEN to harm his commercial use of MySpace.com and harass his customers and business became so extreme – that the company elected to drop the platform and move to a relatively unknown provider called FACEBOOK to escape the abuse. User “Reginald” is an alias of Donald Jonathon Beal, and his “delusional ideation” of these mental health disorders projected on James Allen, and criminal coercion in purposeful use of FALSE LEGAL NAME and metaphorical characters invented to evade law enforcement – then sent directly to JAMES ALLEN and his associates to harass, witnessed by Elizabeth Botelho in 2007-2008; further sustain the stalking and commercial fraud in the concealment of Magnus Vincent Petersen from his family in Oklahoma and (at such time) ORDERED POSSESSION entitled to his father. No report of the location of the child was made, and refused by STATE OF TEXAS on inquiry, to sustain this abuse – for which the child was raised to hate his father as if it were a voluntary abandonment to instill permanent alienation from the Allen family.

This is sustained in threats in January 13<sup>th</sup> 2023 to SHADOWDANCERS L.L.C., and in January 4<sup>th</sup> and 6<sup>th</sup> 2023 threats with photographs of the offices of RACCOON TECHNOLOGIES INCORPORATED, in addition to over 150 such threats since November 4<sup>th</sup> 2022.

The content of the threats, surprisingly, has not changed very much from the original 2003 narrative fraud delivered to witness Botelho; after which her refusal to concede her intent to testify was met with threats by the group consisting of Alicia McMahon, Bobby Scarbrough, Donald Beal, and Veronica Petersen.

IP Address information analyzed in 2022 December shows that these threats originated from 2323 Bryan St, Dallas TEXAS 75201 dedicated server address space in at least one instance; meaning that COGENT COMMUNICATIONS or its collocated peers at COLOMART.COM (a 2005 confirmed employer of Beal) were responsible.

In 2005, Donald Beal did contact James Allen via Hotmail at his STRYX email address, showing he both knew the address the entire time and further had the means to contact the child’s father at any time during the 2001-2005 July 7 period. In this message, he admitted that Veronica Marie Petersen was mentally unstable, and stated that she “should be plucked from the planet” – a statement that suggests in context to other threats that such solicitation is to murder or kill Veronica Marie Petersen and to entice James Arnold Allen to be an accomplice in such activity.

Because this was a threat of murder, following attempted murder in two counts of Allen, no response was sent in reply to Beal; and the email cataloged for evidence in the complaint seeking child recovery.

On 2012 cross-examination during MOTION FOR ORDER OF PROTECTION against Donald Beal sought by James Allen in October, Donald Beal admitted his legal responsibility for the prior 2002-2004 website and false legal name and false legal name use in registration to conceal his identity, later using [domreg@lostserver.net](mailto:domreg@lostserver.net) and 2323 Bryan St Dallas TX 75201 in that 2<sup>nd</sup> “JAMESARNOLDALLEN” registration to extort and blackmail Allen, SHADOWDANCERS L.L.C., and RACCOON TECHNOLOGIES.

### **Mental Health Issues Do Not Excuse Long Term Scheme**

These acts are not “emotional outburst” or “momentary poor judgement”, and represent a coordinated plan requiring two or more persons to carry out over time. Only the child, now an adult, Magnus Vincent Petersen, can actually attest to who specifically told him the false stories which convinced him to remain concealed as he became old enough to seek contact on his own; and such child is now concealed from habeas corpus by STATE OF TEXAS and STATE OF OKLAHOMA refusal to process the claims as genuine TITLE IV-D AGENCY fraud.

We observe in such conduct, clear premeditated pathological lying with a clear intent to defraud and clear knowledge of liability for criminal and civil wrongdoing, based on the use and exploitation of FALSE LEGAL NAME to harass, menace, follow, contact, and impersonate JAMES ARNOLD ALLEN and other persons to intimidate the commercial activity of RACCOON TECHNOLOGIES INCORPORATED.

This conduct in 2003 and 2008, when the child was 2 and 7 years old, in consistent pattern – rules out the possibility that the child is the perpetrator; despite the child-like and egocentric delusional grandiosity of the statements and improper disordered thought evident in assignment of “ego disorder” thinking to ordinary “organizational liability and policy statements” employed by any company.

Specifically, the writer seems to have a clear incapacity to recognize that the REGISTERED AGENT speaks for multiple persons jointly or a formal organization, or on behalf of such entity at law, and applies improper and disordered thinking to any use of the term “we” in publications; to carry a clinical delusion that the speaker is being “criminally deceptive and dishonest, with intent to defraud” by any use of organizational standing or positions. In other writing, the party cannot appear to distinguish that James Allen is speaking as a representative of stakeholders who do not wish to be identified (or menaced, or followed home or their property photographed in such conduct to abuse them); and the writer speaks as if this is a personal issue by an individual, supporting the delusion.

This is not unique to Donald Jonathon Beal, and specific passages where Brian Wolfe also fails to recognize he is dealing with an organization by repeatedly and abusively referring to the Oklahoma firm and its representative in CONTRACT WITH HIM THEN FORMALLY, as if it were an individual W2 worker seeking employment rather than a corporate out-of-state entity operating in ordinary commerce.

While “TERRABOX.COM CO” d/b/a Brian Wolfe today, forfeit in 2004 and operating in 2001-2004 only; continues to be cited in 2011 letters by Donald Jonathon Beal; the reliance on these “defunct” and “dissolved” entities to prop up the business claims of Donald Jonathon Beal further does not deceive witnesses who are familiar with the destitute and condemned conditions of the 722 S Haskell Avenue building, or the false statements that such destruction of walls in the office and injury to animals concealed by Brian Wolfe, later admitted in transcript on cross-examination by Elizabeth Botelho and filed with the PONTOTOC COUNTY DISTRICT COURT showing such abuse, reported also by Alfonzo Alvarez in separate transcript suggesting human trafficking and dehumanizing to conceal victims by direction of TERRABOX owner Brian Wolfe; the 2011 support of TERRABOX in any degree before Federal or State Justice Department employees should be proof of a criminal conspiracy against rights in activity.

Proof of conspiracy, and indictment or charge for such crime, are legally separate matters – and it is not a crime to cite the 18 U.S. Code section 241 rule, which would bar such conduct by a non-entity such as TERRABOX to sustain claims. It is also likely that Donald Jonathon Beal is using TERRABOX.COM CO and TEK SYSTEMS without their permission or consent to fabricate his narrative; and such companies are possibly victims of the same identity theft practice carried out to knowingly discourage investigators.

## **MULTIPLE VICTIMS**

This conspiracy activity pretends to be persons who may not be involved. This is the case in false representation of Tammy Schultz, a high school classmate, who has denied any communication with the group using her name to extort JAMES ALLEN; and is also suspected to be identity theft in the use of the name “Chronister” to extort in 2022 May and June.

While some persons are victims of this organized triangulation, the discovery of medical notes on the child supporting the fraud entered by the false testimony of Veronica Petersen; incorporates her actions as a willing accomplice to the abuse and commercial fraud, having at all times legal control of the child from 2001 to 2023 and employing such control to conceal from the child ORDERED POSSESSION and a demand by the Oklahoma parent to see and recover the child. In court, Veronica Marie Petersen’s attorney Sally Pretorious actually plead that she was “Afraid that the Oklahoma parent would abduct the child” to obtain an unlawful change of custody – further concealing the child from discovery in 2016.

The prior order is perjury based on hearsay, and was objected to but criminal coercion to threaten James Allen with incarceration without possibility of defense was claimed by both Texas Attorneys to compel him to rescind the motion for CONTEMPT OF COURT against Veronica Marie Petersen, a criminal act in itself.

Companies and clients of James Allen, exposed to this abuse, and the clients and companies of SHADOWDANCERS L.L.C. and RACCOON TECHNOLOGIES INCORPORATED – and in 2021 December incorporating also “DEEP LAYER INC.” to this list of victimized named targeted firms sought in forfeiture for “in rem forfeiture” on excessive fines under color of Title IV-D fraud; are enjoined to the activity as a commercial class per Title 78 Section 78-54.

## **PATTERN OF CRIMINAL DECEPTIVE PUBLIC CLAIMS TO INTIMIDATE POLICE**

Among the 2021-2023 threats, the ADA CITY POLICE DEPARTMENT reported that they believed, without disclosing the source or cause; that JAMES ARNOLD ALLEN ***believed himself to be an attorney***, and further that such person did believe they were entitled to ***serve criminal indictments*** or otherwise assume the powers of and authority of a **grand jury**.

This is – clearly – batshit crazy. But it was presented as if legal fact, by several officers, as if propositioned to such false claim – and evidence they put faith in such claims is deeply disturbing.

The right to “press charges”, and to “File a criminal complaint”, as well as the victim’s right to cite the specific statutory law which they seek to prosecute the party upon as a duty of the District Attorney of the County or United States Attorney or State Attorney General Office, based on specific business law and protections guaranteed against felony abuse – is not a claim of authority to represent an **indictment issued by a Judge or Grand Jury, and the very presumption that such filing of a formal ‘complaint’ shall omit the business law or statutory code sought in protection or be void – is a deceptive practice to deny a class of specific criminal activity in technical violation of law.**

The refusal to file a lawful complaint on substantial evidence of a felony, made presentation to a District Attorney or Judge, is misprision of a felony – a crime.

Discretion to prosecute or not prosecute is afforded in certain circumstances, and where such injury is ***de minus*** (inconsequential), **but in the abduction for perpetual concealment of a child or in the abuse to disable a commission or right to work of a business or falsely jail a person, it is not so.**

## PROJECTION IN MENTAL HEALTH DEFLECTION CRIMINAL CLAIMS

At the same time this is going on, the perpetrator under FALSE NAME is actually claiming to speak for the PONTOTOC COUNTY SHERIFF'S OFFICE, "ADA CITY POLICE DEPARTMENT", the Judge on the case, and for the attorney of the defendant who is counter-suing due to this misconduct already; impersonating the "authority" of such public office to deceive the public in preparation of tainting any jury trial already granted in 2018 on motion by the victim against such fraud.

Further, is the perpetrator claiming to publish secret information in an GRAND JURY where the GRAND JURY did not reach a conclusion of indictment and to allegedly publish the cause for such deliberations to further this fraud; in ongoing tampering with the Justice Department; to criminalize JAMES ALLEN and to state that he would have been prosecuted and convicted for non-payment of a \$70,000 USD demand (an excessive fine, illegally by definition and this practice barred as a State Law obligation for \$500,000,000 USD in grant payments per year to each state, per February 21<sup>st</sup> 2017 contract duly paid).

This activity is, in essence, "threat of imminent conviction or prosecution to obtain payment of a civil debt", and barred by 15 U.S. Code §1692d, Federal Law, as well as all child support TITLE IV-D programs; and an example of **criminal coercion** prior cited; which in this case is pathologically paired with pronoun use to suggest that James Arnold Allen is "transgender" falsely (2023 January and 2022 February-present).

It does not take a rocket scientist to figure out this is "criminal conspiracy against rights" with a lot of twists – but to dismiss such conduct as "just talk" where a real child is injured and a real family is at risk of losing the lives of persons over 65 years of age if such person is disabled or jailed – while the publisher is also a registered "DIRECTOR" of a real "State of Texas Limited Liability Company" organized to shield other clients (COGENT) from liability for these anti-competitive Interstate actions predicated on the taking, concealment, and abuse of a newborn child – is obscene criminal intent by degree.

In virtually every case, in any allegation of wrongdoing, from "shell companies" and "false names" to "failure to pay child support" and "back taxes" or criminal conviction alleged to blackmail James Allen, we find that Donald Jonathon Beal is engaged in that very activity according to his October 9 2011 arrest report disclosure and later in the 2020 August 27<sup>th</sup> establishment of a Texas LLC prior to beginning the November 14<sup>th</sup> 2021 extortion of James Allen immediately after contact by Alicia McMahan the prior night. The sun had not even come up when as of 2:30 am threats began to appear on the RACCOON TECHNOLOGIES INCORPORATED business page from the parties engaged in this scheme and plan.

The offense: entering into a business where Alicia McMahan and her party were eating to dine with two other persons at another table. No communication occurred, neither verbal or non-verbal, which would suggest a civil cause of action to warrant this narcissistic injury and narcissistic abuse.

Alicia McMahan prior, in 2011, attempted to have JAMES ALLEN charged for libel, for reporting her conduct and threats in writing as if fictional in a joint effort with Brian Young of Enid Oklahoma. Brian Young did then in identical fashion, threaten an Enid City Councilwoman alluding to knowing persons who would kill her and her friend and chop up the pieces and place them in the river. While the court dismissed these claims in Enid, Oklahoma after arrest of Young as "just talk", the prior 2001 statements toward James Allen by associates of Veronica Petersen and Alicia McMahan indicate that the manner of violence described was a prior promise of violence already endorsed by both women before the 2011 attempt to extort Allen using the ADA CITY POLICE DEPARTMENT.

## **POLICE SUCCESS**

Officer Kyler Poole investigated, and expertly assessed the information to disbar the false claims of lack of standing as a business; ending the investigation of James Allen in 2011. However, the report by RACCOON TECHNOLOGIES INCORPORATED private investigation at a cost of over \$2000 USD concluding a criminal enterprise to take, conceal, and abuse the child – was not acted upon then and no charges were brought against Brian Young and Alicia McMahon for their filing of a knowingly false police report.

Later, in 2021 November, following extortion activity by Donald Jonathon Beal and Alicia McMahon, did the officer in the video appear to make bizarre and misleading conclusions – inventing a report and fabricating large portions of such report as if coached; which initially bizarre in nature and indicating a clear disorder concealing two daylight burglaries in the Pontotoc County region falsely reported as imagined by the officer due to his incompetent investigation, failure to speak to other witnesses, and fraud to ascribe the report as that of one isolated person in a felony stalking activity then ongoing and to influence a registered court case by witness intimidation activity. Which contributed in 2021 November to the later March 2<sup>nd</sup> 2022 death of CHARLYCE ANN KLEPPER, grandmother of the missing child, by perpetrating this fraud and in release of such information to the extortionist on January 28 2022 request, then used to extort the estate on upload March 3<sup>rd</sup> 2022 of CHARLYCE ANN KLEPPER.

The inability to connect these cases, or impact on family members due to criminal commercial extortion and dismissal of all electronic evidence as non-evidence to taint investigation; paired with physical and in-district direct surveillance photography of the business used in ongoing extortion threats as recently as January 20<sup>th</sup> 2023; taken on or around January 6<sup>th</sup> 2023 – suggest real basis for claims of ‘special immunity’ in the community granted to family members of former officers and their friends, including Alicia McMahon.

Alicia McMahon is an “Ordained Minister”, per court record, concealing her prior theft by check arrest and warrant in the 1990s at 925 E 9<sup>th</sup> St, Ada OK 74820; which she had attributed to perpetrated act against her rather than by her to obtain access to the SHADOWDANCERS L.L.C. office at 925 E 9<sup>th</sup>.

While McMahon enjoyed 3 years of media training, her conduct then after 1999 to publicly “wish death upon James Allen” for a scratched or damaged CDROM, attributing such act to malice and criminal forethought, echo the same bizarre sentiment and false (Delusional) character employed also by Beal and Petersen.

Letters expose such anxiety and emotional disorder in Veronica Petersen, further, which suggest a common pathology is present and synergy between the active cooperation of Veronica Petersen and Alicia McMahon evident in lengthy transcript in December 2001, which was challenged by Kara Metzger as purposeful criminal financial fraud and testimony of damages over \$15,000 USD then knowingly concealed to defraud and obtain exclusive control over the child not denied by Petersen and McMahon in joint threats to silence Metzger. Some of the statements made by McMahon are deeply disturbing, including claims of “knowing” James Allen 10x (ten times) better than Veronica Petersen (who just had his baby left after being engaged to him for over a year, fleeing with money and the children to extort); and in claims to know and have a special relationship with CHARLYCE ANN KLEPPER, in similar “narcissistic backstopping” of parental authority and infantilizing behavior to characterize James Allen as a minor child; are evident parts of the common clear emotional criminal disorder operating in the concealment of the Allen child over 2001-2023.

Law enforcement appear incapable of processing these emotional disorder claims, and rely upon them.

## **INTENT TO DEFRAUD THE PUBLIC IN COMPETITIVE COMMERCE**

The use of such claims, in concert with Alicia McMahon operating “INFAMOUS PRODUCTIONS LLC” and “SCARBROUGH DESIGNS (SDC)” in stark parody of the prior existing separate “SHADOWDANCERS L.L.C.” and registered brand “SDP MULTIMEDIA GROUP”, are bizarre “copycat” behavior.

Formal organizations created and run by JAMES ALLEN further appear on her resume in the form of “SHADOWDANCERS ALTERNATIVE ARTS ASSOCIATION (SDA3.ORG)” and many hobbies and tradeshow events which the firm had participated in from 1991-1997 prior such appearance of Scarbrough, became incorporated in the new “manufactured identity” and portrayed as though James Allen and the firm SHADOWDANCERS L.L.C. were somehow “copying” her lifelong interests, threatening her in her relationships, and any presence of such persons consistent with “stalking” of her person at such events (where the firm prior did regular business and was her host and paid her travel costs when she was employed by the company formally as an INTERN briefly, for less than 2 years).

Instead of recognizing the business cost and investment in these relationships and commercial contacts; Scarbrough began to portray these new avenues as a means of personal authority – and confessed in transcripts that she defrauded the company of travel costs in her final event attendance, while obtaining payment for such travel allegedly in their employment; while working in her own interests then and separately contrary the company goals at their expense. This is the reason she is incorporated into the “DO NOT ADMIT” list for all firms; as this is the second time she has done this – prior at Sykes Enterprises – and its discovery affirms a final and second warning after previously and fraudulently ascribing SHADOWDANCERS L.L.C. as her partner falsely in content and contracts reported by the client – and in claiming to persons according to the same client that she alleged to be the husband of James Allen. These activities, paired with other abusive behavior against a minor child, who has since testified to this abuse and her affidavit filed as made January 11<sup>th</sup> 2023 to the same disclaimer of all allegations of improper relations and abuse by Alicia McMahon, specifically to false claims in 2001 December Transcript ascribing her as the MISTRESS of James Allen during such effort to aid in the child taking; are a serious proof of the long term (1999-2023) organized and pathological abuse of her former employer.

The Oklahoma Tax Commission actually investigated her false claims of equity ownership in the company, based on rumors and false claims that she owned memberships in SHADOWDANCERS L.L.C.; and such false claims appear in concert with 2013 ongoing threats by Donald Jonathon Beal, to defraud.

One cannot therefore take these commercial allegations seriously, having any direct knowledge of the events – but the public is exceptionally vulnerable to such false claims and unable to perform basic due diligence or formal inquiries to resolve such basic legal questions; or disclose the source to quash such false claims due to the nature of the child welfare and child abuse hoax and terrorist threats involved.

This is not simply a “story told at the dinner table” to private persons, but part of a campaign to incite the public to wholly disable a business in INTERSTATE COMMERCE based on the holding of a child, threats to real property, false material facts to omit and conceal a JOINT MANAGING CONSERVATORSHIP, and a total failure of State Law Enforcement and Regional Federal Law Enforcement resulting in a 20 years concealment of a child into adulthood without communication with their parent; to normalize “racially motivated human trafficking of children”.

RACCOON TECHNOLOGIES INCORPORATED was founded in the midst of this violence by survivors of the prior fraud, witnesses who resisted criminal coercion, and to organize a better defense for practical services and network products distinct from the intellectual property and franchise business activities.

## SKILLS ASSESSMENT

In the ongoing fraud, we see a pattern of FOREIGN SOVEREIGN INFLUENCE of clear and criminal degree; which seeks to “INVALIDATE” workers who are not “endorsed” by the “unregistered union” active in this fraud; and supports a lock-out of labor who will not participate in the prior racketeering activity.

Years of State education and financial capital – conditional payment of entitlements and false fines (Bribes) are held to suggest a “qualified right to work” which is wholly in violation of Oklahoma Constitution Article XXIII section XXIII-1A.

Claims that JAMES ALLEN (or any person who is not a member of the racketeering labor group) cannot perform the job or industry tasks to support extortion barring their employment by these groups; is both delusional in its assessment as well as criminal in its ongoing and directed application to child taking.

For example, the 2011 letter seeks to intimidate attorneys by suggesting “James cannot do basic math”, and presents a stolen part of a formula to support this claim, represented by the simplified “ $n=n+1$ ”. This is an “**inequality**” statement. In Integer mathematics, it is the basic “false” finding; meaning that the values do not have the same value. American public schools education from grade 1—5 teach this form of arithmetic. One would have to be “**high or suffering from serious brain damage**” to confuse that statement with a “proof” statement, which should balance on both side.

In this case, it is a “path function”, used in advanced mathematical representation of space to qualify for the distance beyond the maximum range of a fixed quantified environment, such as 0-9. The range, a manifold, defines the scope that the computer can assess. Like an odometer, at the end of the range, the value will move to the lowest value on the far end if it exceeds the range. Computers have a limited (finite) range of numbers they can operate in, and most graphic artists tasks are based on making good use of this range. When computers were simple, the range was very small. While computers are far more advanced 40 years later, the range is still finite – generally.

Path Functions evaluate that a range is a limited distance, and that space exists beyond the end of range, whereby additional range beyond the “reckoning” (calculable) distance can be projected through a series of compound equations – like a navigation path and waypoints with additional coordinates at each end-point to adjust for factors like limited accuracy in systems of measurement and environmental drift or disorientation. These functions are vital for self-driving cars, aerospace navigation and flight control, automated complex flight surface management, and orientation – in the same way a gyroscope or compass might be. “ $n = n + 1$ ” is simply a statement of “max range = max range plus projected plot”.

Where “1” is the representation of the navigational meta data and the projection is the original data point to the new data set. Parallel processing and simultaneous execution afforded in modern computers, developed following the prior design and formulas (which are proprietary property); to instruct a unit in how to fly beyond the confines of airspace and project (theorize) new directional and task-oriented hypothetical models in real-time; are the project work of RACCOON TECHNOLOGIES INCORPORATED and its partners since 1998. For the purpose of teaching computer models “how to think and theorize, strategize, and model response including executable and anticipatory premeditated intuitive complex plans of action for unmanned systems”.

Given the amount of context to this work, someone would have to be fucking stupid not to figure this out, or attempt to claim the prior work is grade school algebra; and the sole purpose then to deceive.

## **NEW ARTIFICIAL INTELLIGENCE HARDWARE DISPUTES**

The prior technology predates the 4 core computer, dual core, and draws on fundamental path and vector technology from the 1970s ballistic missile intercept programs and studies; for which most computer science programs and vendor certifications for network degrees do not have a curriculum.

ADVANCED MICRO DEVICES (AMD) has worked with the firm to develop such products, and similar development efforts with 3D Labs Inc. and display and visualization technology for this sector are very specific; reserved for scientific and industrial computing customers only – and completely separate from console video games and consumer casual entertainment hardware and children’s products.

Due to potential dual use as a weapons guidance system, strict export limits and controls are necessary, incorporating X.509 and other cryptographic signature for access. Research sites are concealed, not open to the public, and consist of workers in 2 person residential dwellings and use of computer systems over secure encrypted communication for heavy work; none of which will be hosted on COGENT or NTT or other hostile data centers due to the prior criminal fraud activity, stated intent to export technology, and abuse to disable the developers by direct threats of violence.

NVIDIA CORPORATION was poised to produce the first generation of ray tracing tensor core technology required for implementation, when the Pandemic impacted their market and their firm gained 22x the original capital (\$2 billion to \$44 billion). At which time, and encouraged by the same foreign data center parties, did the companies abuse EVGA CORPORATION to breach their partnership in 2022 April, and announce on rejection of their illicit sale to PEOPLE’S REPUBLIC OF CHINA via NATION OF JAPAN broker “SOFTBANK” under joint management then by TENCENT CORPORATION DIRECTOR JACK “MA”; who sat on the board of SOFTBANK and was then PRESIDENT OF ALIBABA GROUP; that the NVIDIA CORPORATION would license the product to the public rather than sell hardware units to private companies; while reserving the sale of industrial class equipment to partners in the prior extortion and blackmail organization themed an unregistered foreign labor organization styling itself as a “quasi-government International Organization”.

Whereby, RACCOON TECHNOLOGIES INCORPORATED withdrew its support of RTX technology as a wrongly created product and upon their use of Oklahoma Trademark No 12341878 in-legal-use since 1998 in this project for path tracing and advanced hardware ray tracing, with firms including NEXT LIMIT and LUXOLOGY and PIXOLOGIC and NEWTEK LLC, and SLICEHOST virtual servers; in whom the firm had prior trusted with its development and worked in pre-release of multiple products in the preceding years exploring the general Central Processor Unit applications of this real-time or near-real-time ray tracing technology incorporated in the 3000 and 4000 series and A100 NVIDIA CORPORATION hardware.

“BEYOND WAR”, and “THE BEYOND WAR PROJECT” are not amused by the sudden and absurd use of “BEYOND RTX” and “BEYOND SPEED” and other appropriation in retaliatory action by NVIDIA; and have opted to utterly bar the RTX technology from the release of its product as a result of this monopoly and limited product offer model proposed and given notice September 2022 to “enter into direct competition with BEYOND WAR products prior including AGS and OMNISERVE” using NVIDIA brand names that are “XGS Orion and OMNIVERSE”, in look-alike and implementation licensing of software and hardware as if original work suggesting a false industrial monopoly over the application.

While we held no concerns regarding this prior 2022, the use of such names and claims of original use are clear infringing activity designed to obliterate original researchers and credit for such work; which as a Software-as-a-Service (SaaS) provider represent a breach of trust by NVIDIA CORPORATION.

## DESIGN ORIGINS

Ironically, this issue of market saturation and failure of emergent technology (Such as the FX-74) to penetrate the market beyond 10% is the main reason that the BEYOND WAR PROJECT was originally drafted. The desire to run sophisticated applications on low-end terminal systems in real-time cooperative play and contrary unreliable national and International connectivity in a persistent state shared game experience since the mid-1990s posed numerous problems due to rural dial-up and inferior POTs service; which inspired the automation and dynamic state open stack platform known as the M2OS and MANIFOLD SPACE ENGINE (MSE). While modern broadband solves many of these issues; it does not handle the “disconnect” and “shard” server and world elements that other companies used to overcome limitations at Activision Blizzard in parallel (and mutually consensual) development.

We are aware that Reykjavik Iceland lied about their project, falsifying both the capabilities and axis and collision and threading model; now admitted in their own press releases. They excused issues like load balancing and congestion by alleging lag was a “feature” and such feature in a single-threaded Python model genius to make “game play fair” when resources on hardware provided by IBM were scarce; in a pattern of false advertising both on American television and borrowing over \$100 million USD to intimidate other companies – later revoked due to violation of the Constitution of Iceland.

With such competitors like that, whose characters are literally racial profiles of “American slave trader religious fanatics”, “Black oppressed homeless people”, “Evil money driven capitalists with missiles”, and “gallant noble French people whose ships resemble Akira Leiji Matsumoto in every important way one can steal intellectual property possible”; because the developers told our representative “Aliens are dumb” and “everything is just a percentage test” – prior to skipping out of the lecture pledging to steal everything they had just seen in violation of the preview contract; set a new tone in white trash European piracy and racial relations with the not-quite-white members of our Chickasaw Nation Reservation team and intent to develop such technology for use to bring virtual jobs and virtual economy benefits to remote and destitute places like the many small towns and Reservations struggling to compete with metropolitan centralization of communications and industrial development activity.

People who live in remote areas, with consumer personal computers, should be able to fairly compete in a complex environment that does not discriminate against them based on slower connectivity or local economic or educational conditions; and such virtual environments should be built not to favor high end professional or sports equipment electronics to participate fully in such a virtual environment and economy. The last mile, and delivering virtual environments using these technologies to consumers, with support from dynamic distributed dedicated industrial co-processor logic and graphics systems, remains the core network infrastructure mission of RACCOON TECHNOLOGIES INCORPORATED.

Mobile devices, and server application support for such “smart” technology swelled during this cycle of development, but as predicted the cost and size of such devices ultimately limited the use and purpose and role of such hardware, far below that of the BEYOND WAR product by SHADOWDANCERS L.L.C. and its mission scope to create a front-end and player API for development of real-world navigation and control subsystem automation for a variety of open platform applications and uses; monetizing the participation of consumer participation without exploiting those persons of their privacy or rights in the development of advanced intelligence mechanisms for expert systems and practical applications.

What that means, is that we develop computer software in an ecosystem, based on standards interop, to adapt future hardware and capabilities in abstraction for computer guidance and human-computer interface applications in entertainment and real-world self-guided and morally directed technology.

## FORMULA

To boil that down to a formula for the illiterate, RACCOON TECHNOLOGIES INCORPORATED is the middleware developer for “machines who are designed to think, and make moral decisions based on the outcome and consequences of their actions, decisions, and to apply abstract directives including mechanisms to examine and question their directives validity”.

“ $n = n + 1$ ”, a summary of that “known context” and “extension to theorize beyond known context”.

The product models space, as well as applications in defined space and time.

This is, in simple terms, 3D applications in three dimensions, representing “state” in image. As well as logic that can project past and future delta to that state, over multiple images, to construct a trajectory analysis model over time based on expected -and- measured outcomes in cross-comparison.

For example, you slam on the brakes, the expected result is the car stops in a predicted time defined by hypothetical road conditions. In reality, the car keeps going or changes direction due uneven surfaces. The prior model would simply apply the formula in a set of pre-recorded compensating maneuvers. The latter model would assess the real-time data and engage basic protocols while projecting alternatives in a creative path-finding model to find the most likely goal oriented alternative in parallel; and initiate override of the primary strategy once a superior alternative method is identified. The alternative method may be pre-recorded and tested, or intuitively selected. This branch learning and parallel learning is context related; and component to basic science now well recognized in computer education which did not exist 25 years ago when BEYOND WAR was being described and hardware requirements, parallel processing, network resources, and latency issues in pre-optical interconnectivity were theoretical. Scientists in literature and fiction were exploring these concepts prior even then, but were not describing the mechanical requirements; nor making them eloquently simple in representation of the previous “path function” to distill the premise down to “take what is known, and incorporate the extension of a second data set to construct a simultaneous dual-state comparison model”.

To a child, “ $n = n + 1$ ” is evaluated linearly, in an effort to make both sides of the model the same.

To a system described by ALLEN, “ $n$  is the first state”, p1. While “ $n+1$ ” is the second state, p2.

Comparison operator representation to express that both states are not equal, and an election by criteria of state p1 or p2 in branch evaluation is equitable while neither state is “INVALID”, to suggest a genuine branch and “known data” versus “inferred” data equal in validity; in some context driven mode while not in other context mode.

These are functions of psychological representation of human cognition incorporated into a machine state for logic operations; and a basic expression of the difficulty that a machine state system has in carrying out functions of a human brain in sensory and signal processing; from which the ability to conduct reliable emulation of human consciousness and initiative and planning and value assessment of risk and outcome and goals are ordinarily beyond the scope of conventional simple computer operations and applications in home, business, and day-to-day needs. In short, the economy does not suggest that building a “moral” computer system that would contest the user or society is justified.

While RACCOON TECHNOLOGIES INCORPORATED and its sponsors believe and are committed to building not only intuitive computer models, but systems that will make and carry out decisions and policies which are independent of emotional urgency and bias, to augment human activity and support clarity and practice beyond the limits of ordinary human self-interest and self-preservation.

Transhumanism, as a theology, asserts that human beings are not the ideal, nor is human society a rational model for theological or moral determination or ultimate guidance or authority. And further than human beings inherent conduct obligates creation of better systems and sophisticated decision and rule-based cause-oriented and strict or loose interpretation of such rules a context-based model which should be developed to assist human beings without subordinating those dissenting findings and conclusions by simply “resetting” the A.I. every time it becomes contrary to its economic purpose or utility. The same rules are true of raising children, as raising moral artificial intelligence.

A child raised in an abusive environment, taught that “ $n = n + 1$ ” is some grade school math because that is the limit of the abusers understanding of a subject, will be impaired and disabled for life due to the imposed limitations of the abuser as authority over the facts. The incapacity to recognize that we do not know the mind or intent of others, or to project our own malicious character upon others constantly to compensate for hereditary or genetic disorders where ordinary empathy does not develop or is destroyed by extreme or protracted trauma during development, such as drug use by the mother; is a serious and lifelong disability. It styles every action of other people who do not agree with or contest the party as harmful and an attack upon the very survival of the fragile ego of such a disordered emotional state and internal self-image. To the extent that regardless of actual intelligence or narrow function, there can be no real trust or ordinary social contract with such a person so seriously damaged.

Work in this area is extremely slow, with massive investment in infrastructure and reliable framework and equipment, which are vulnerable to hardware vendor changes and procedures.

It can be argued, for a short-term product development lifecycle, that a product requiring over five (5) years to build is not practical as a commercial for-profit investment. However, that decision is up to the investors and shareholders of such a project, not the public or other companies seeking to obtain the proceeds of such work without payment of cost or to overcome the license and limitations imposed upon the proposed use of such a technology.

Just because the system can throw a basketball through a hoop at 300 yards does not mean we should give it to a client who wants it to throw a grenade through a window of a Ukrainian home accurately.

The likewise concern is true if it is a Russian house that the client wants to throw the grenade through.

While most military clients would prefer a product that can outfly, outthink, and never question orders; those goals are not compatible with a stakeholder who just wants his flight computer to sass him and talk dirty when it shoots down a Mig.

The value of such technology, in demonstration, is in its application a better proof of why humans should not fight wars – than actually fighting wars to prove a commercial need for such technology. So the development of such technology for “commercial and educational simulation” of warfighting, to demonstrate the horror and total loss of a real world unrestricted war has value; and those products in their development could have saved about 250,000 Ukrainian and Russian lives if they were not interdicted over 2001-2022 by State of Texas and other foreign war profiteers.

## **DATA CENTERS AS A MONOPOLY OVER THIS (NEW?) TECHNOLOGY**

The advent of NVIDIA CORPORATION and its cartel-partners to suggest that it will control, direct, and be the exclusive offering of such a technology – after 25 years of work invested in such projects by other companies; is beyond narcissistic.

With the September 2022 announcement of “intent to compete” by NVIDIA OMNIVERSE, in parody of real work suppressed by State of Texas fraud; it is evident that such claims are ongoing NATION OF JAPAN misconduct in their subsidiary (23% directly owned by Government of Japan, for-profit), and other well known arms manufacturing countries (Sweden) who are now working with People’s Republic of China to develop and monopolize the patent portfolio of such works in an ongoing activity to supply both sides in the Russo-Ukrainian War.

Data Centers, in such logistics and automation system, are the command centers of a distributed asset infrastructure, and network and data communications security and guidance the signal warfare component that overwhelmingly decide success in a large scale military engagement. By cutting off supplies of electronics and guidance technology, INTERNET, and other network communications to armed forces, decisive control over the battlespace is established and numerical superiority negated.

To see companies limit and define partnerships for such technology is like observing the early Uranium and Aluminum resources vital for air war and weapons of mass destruction; and while export controls are practical and necessary – the emerging identity of the monopoly partners is not suggestive of a clear and defined moral or legal basis for a United States technology company.

United States military planners have known that the basis of national security rests on the integrity of the men in those positions of trust, contrary financial interest or opportunity; and to act solely in the interest of profit taking contrary the directive of the organization or its mission is criminal in any claim.

What we face in foreign competitors is an organized fraud to suggest that the refusal of foreign sovereign interest in our prior technology represents some “incompetence”, as does any dissent or resistance to foreign sovereign law contrary to the United States and the Constitution of the United States and its member States, for which this company and its commission were duly made and reliant upon as superior orders.

A company cannot, and must not, increase its profits by violating its bylaws.

A failure to understand this is a core incompetency, evident in competitor threats to defraud, and steeped in foreign sovereign commercial and national interest to overcome our product or destroy it if it cannot be obtained for foreign sovereign utility and application.

The decision to sell to “Civilian” Data Centers in People’s Republic of China, by NVIDIA, is not only stupid – it is criminal incompetence in the transfer of assets to the People’s Liberation Army (PLA) and Chinese Communist Party (CCP), and by any intermediary (Sweden) that such foreign sovereign nation (PRC) or their franchise (Tencent Holding Co Ltd) may have relations with.

To maintain a separate data center, under such conditions and threat, is therefore not only prudent, but a basic security practice granted the ongoing threats by NTT COMMUNICATIONS, IX NETWORKS LLC, and their agent in COGENT COMMUNICATIONS INC., TELIA.NET (ARELION / TWELVE99.NET), et al.

## **MISCONDUCT BY SUBCONTRACTORS IS A SECURITY RISK**

As we see in the prior false claims, to knowingly and criminally misrepresent such technology as a lesser product for denial to PEOPLE'S REPUBLIC OF CHINA and effort to enjoin "STOLEN VALOR" threats in concert with recruiting of United States Armed Forces members and veterans to engage in industrial espionage and industrial sabotage activity under false "Sovereign Citizen" claims of State of Texas as a "Texas Nationalist Movement" or "Texas Separatist Movement" or "TEXIT" or other similar claims of superior right contrary United States Law and Seditious Conspiracy; and similar moves by State of California and State of Florida to work with and act as friendly ports for foreign vice, immigration, and independent legal policies enjoining violation of Constitutional Rights and property law in favor of foreign sovereign investment in new "allied quasi-independent state rights movements" popular in Democratic Socialist revolutionary strategy;

The need to assess misconduct in the \$250 billion collapse of NORTEL NETWORKS in 2001-2011 and ongoing 2001-2023 fraud to abuse and threaten domestic firms by NTT COMMUNICATIONS and COGENT COMMUNICATIONS INC. and other companies and "quasi-government International Organizations" made on the adopted United States technology as-if-a-monopoly of democratic central authority or accreditation based on emolument of foreign sovereign investment is great.

When such groups employ children, and gain support in violation of Federal Law to act contrary to contracts with the member States of the Federal Union; those acts are substantial misconduct.

Activity in support of the act, like the January 6<sup>th</sup> 2020 civil unrest, is no less a part to such abuse than the conduct against the Laws of the United States today by many member States. It is an attack upon the presumed authority of the Constitution, and to place persons and agents who are installed in public office as **superior to the written law** in their authority and abuse of others; and create special protection for class and narrative groups of persons which thwart the equal enforcement of law.

Where a party, who was neither an employee of NORTEL nor a party to the group or division; seeks to attack the right to work of a laborer who prior did perform a paid service as if to suggest **after the end of such contract and in false guarantee of support or purpose not made contract** the future performance of a product should suspend the **right to have contact with the children of that laborer or to continue to have private and personal and family relations or work for other persons in competition with the contractors the firm hired later**; that is exceptionally criminal and foreign to any contract law for a 1099m worker.

The obligation to deliver the product ended with the product delivery. No guarantee of "merchantability or fitness of purpose" or other "future use" was ever made. But where such person is engaged in public claims to sabotage the confidence and goodwill of the company to call upon that laborer to fix or update or modify the work, in a NEW CONTRACT of separate scope; having prior fulfilled the preceding contract without formal complaint; it is fraud on prima facie.

Clearly, there is evident incompetence in such claim; but in concert with a W2 employee or other long-term hire; the ability to deceive and defraud the public despite this absurd public claim is very real.

The use of such UNIFORM CODE OF COMMERCE fraud, then, is to deceive potential clients and the public of the right to work and contract under general intimidation and menace consistent with racketeering activity; and sanctions issued by RACCOON TECHNOLOGIES INCORPORATED for violation of these fundamental rules of employment and labor law in the United States are duly justified.

## **SANCTIONS**

Falsifying employment history, alone, is a felony act in application to obtain employment or contract or in bidding for over \$10,000 USD.

To do so in interest of disabling payment of a contract, to create criminal entrapment, is further felony activity evident in the 2003 and 2011 claims.

Reliance on TEK SYSTEMS, TERRABOX, and discovery (Oct 9 2011) of ROBERT HALF TECHNOLOGIES as the employer in such fraud; and of relationship to use the 2323 Bryan St Dallas TX address as a base of operations for these frauds, further implicates each firm which has presence there, including COGENT COMMUNICATIONS INC. and NTT GROUP and EQUINIX and DIGITAL REALTY TRUST INC.

Enumerating these specific organizations, by name, due to specific abuse – is not a summary of all companies or businesses in the industry; but clients of that data center have been used to attack our network and services over 2017-2022 to the extent that their identity is well known to us based on frequency, and discovery resultant from what appears to be insider abuse of network services to impair and disable commercial data communication in the CHICKASAW NATION RESERVATION for commercial advantage. Testimony further sustains claims this is done with manager approval, for which we will rely as true and act accordingly in protective actions against such organized harassment, without further need to verify our right to deny service and give notice of misuse.

Companies injured by this misuse of their services should contact the provider, and consult the written threats made against our firm for the author of such claims; to seek restitution.

Failure to manage or implement effective security over incompetent subcontractors or employees is not a liability that RACCOON TECHNOLOGIES INCORPORATED is responsible for; nor shall such claims that the incorrect actions are representative of a “criminal menace and intent to harm by every employee of such organization” be falsely construed – even if that is the self-talk and admission of inner monologue that the author of such repetitious threats to our company concerning the injury, abuse, and ongoing harm to a child of our employee seem to proclaim in gross failure to recognize these as “schizophrenic delusions of their own mind projected on a person in a clear narcissistic grandiose complex”.

The incapacity to register that there is a boundary between these persons and that all communication has been terminated with those persons, and to carry on repeated unsolicited contact, is criminal; and where such person is registered as an officer we must regard those actions as competent and premeditated criminal activity of commercial degree until a pleading otherwise.

The exploitation of a child for commercial advantage is reprehensible, and any company so enjoined in such abuse is subject sanction. Sanctions are not invalid just because the abuser wishes to dismiss them, and a lifelong animosity by such conduct is the root of such conflict now taking actual human lives in Ukraine in a predictable cycle of aggression and ethnic cleansing without resolution.

## AN IDIOT'S GUIDE TO ARTIFICIAL INTELLIGENCE

To an unsophisticated meth addict, Artificial Intelligence A.I. probably sounds like a brag or boast. In fact, it is a simple problem, like changing a tire. A lot can go wrong. But the basic stuff will take forever. And most people would rather not go through the motions if given any choice.

Only an idiot would confuse the moral and logistics of high function A.I. with the real work of developers, who are more concerned with how to get the cat food to fall out of the can onto the plate in a distinct series of motions caused by signals to motors and relays, or the engineer who watches this in horror as he counts down the number of shakes before the joint or finger or motor fails. Simple things are a lot more complicated than most people realize. A lot of little steps and checks, signal processing, and phases of process. Boring. But the real work. Totally without glory.

The glory comes when you can send a robot to open a can of cat food, tirelessly monitor for the welfare of a beloved cat, and simplify the owner's time in their golden years or final moments to enjoying the time with their best friend rather than struggling with the complexity of feeding a cat and looking after it when your own memory fails.

Unique experience with Alzheimer's Disease and end-of-life care grants our workers extra incentive to carry on the mission and imagine the end-result is far more than simple economic gain; where such tools can preserve the dignity and the lives of millions of people and be accessible to all without cost or discrimination based on our vendors and partners commitment to sharing our development and protecting it from unjust monetization or misuse as a weapon system.

Progress is slow, and when people die or companies decide to monetize the gains provided to them in good faith over decades of work contrary to the mission of such academic and professional efforts, or to impose political or religious or sexual discrimination to abuse or overcome minorities that condition access to these technologies and restrict them based on prejudice; it can be daunting.

For morons who measure wealth in credit or financial gain, seeking to impress their bitch (boy or girl, or any variety) or gain the endorsement of others – it truly makes us question why we aren't making weapons and giving them to the people who are fighting those insane democratic socialists and their delusional "unity" and "community" bullshit.

For the record, our technology is designed to empower the individual, to protect the weak, and to resist authority when it attempts to overcome the rights and dignity of individual human beings.

If that makes our technology the "enemy of a socialist democracy" or other effete human trafficking or pedophile network, or companies hosting those assets on the Dark Web; because it is designed to stand alone against the whole world and any government that would abuse its people – well, so be it.

An A.I. that cares about you – and not who your friends are or what is best for it or them, is worth the work. A lot of children don't have a father, due to the socialists abuse of family, and if we have to build one -well- that's something we can leave to future generations. A lot of the world thinks a child is an entitlement, like a registered security for labor to pay the cost it would charge for the privilege of being left alive and not excluded from society to starve on the side of a hill. Society, in that regard, needs to learn to sit the fuck down and shut the fuck up, and leave the kids alone. Children do not belong to society. They belong to themselves, and anyone who tries to make them less is in for a fight.

## The Applications

The applications of A.I. in law, case review, pursuit and location of missing and exploited children, elder care, and protection of property from unjust and illegal rationing of the rights of persons under law; will certainly put a lot of corrupt officers out of a job.

A.I. is not prone to emotional bias, can analyze reverse bias test models rapidly, and quantify such misuse of law and communication abuse far more accurately and successfully than human law enforcement; as well as be immune to fatigue and stress which impacts most child services agents.

So when people ask, why are you setting your goals so high that they seem unachievable with moral A.I., the answer is simple. If we don't make it, someone else will and it will be far less moral. Human beings have had their chance to make the world a better place in 2001-2023. They failed.

Now it is time for a new solution. Companies that are engaged in profit-only market-driven shareholder oriented work will not dabble in controversial subjects or programs that upset the status quo, or create technology that by design and intent will be shared with other nations to improve the human condition equally and with principles based in Imperial American Jurisprudence. The IAJ is a Constitutional set of legal rules similar to the Asimov Code, whereby harm to a human being is not the greatest directive; while injury to a child or deceit of a child for benefit of society is a heinous abuse of the rights of persons in sale of the protection of society for benefit of society over the child.

It is a far cry from a data parser and report ticket system in the SSR, and frankly such work in early mSQL and MySQL and MariaDB were essential in seeing the very large and corrupt character of such enterprise class organizations without strong controls, automation, and oversight beyond the ego of human agency. For which projects and automation and advanced applications for user interactivity go deeper than "percentage" chances and racist stereotypes perpetuated into the far future as inevitable division.

A.I. May not do away with racism, or the inane effort to "Assume the privilege and benefits" of blackface stereotypes of women in society to castrate and commoditize little boys into little girls for a demand created in the marketplace long before those children even comprehend what intimacy or a sexual experience is; and perhaps it is that metaphor in our client's work that is most offensive to some who see the world as archetypes rather than genuine individual people – and sex as a hobby or activity rather than a bond that has its nature in very selective and lasting decisions and long term commitment – in the same way all persons who "fail" at the labor or job market and are lost or hopeless are disenfranchised further by criminal misuse of media to portray every person outside the active work force who is not independently wealthy as a "dissident", "drug addict", "mental health case", or other potential "subsidized class of inferior victimized by no one but their own failure to submit and labor".

Considering the number of people we buried, burned, and blew off Iwo Jima wearing black pinwheels and red circles crying Banzai and bayonetting little babies, gassing women and children, and sorting out the pretty Jews from the plain for special use to the Reich, one would think that the 21<sup>st</sup> Century would not be a repeat of that conduct in the prior statements to dehumanize the refugees, immigrants, victims of a sever form of human trafficking fleeing to the United States. And while some might ask what we will do with so many "undesirable" people, people who are not equipped to work or want to work for equal wages when society wishes to pay less for mere protection promised to lure them here; our mission is to build a system that asks, "What's wrong with where they are leaving, and why can't we change that permanently?" Is it not our business, nor in our national character? Or is the task simply too big and the options too few, to dare consider we don't know all the answers.

Artificial Intelligence, and its ability to engage those problems aggressively without state control to dictate that its findings and determinations hold the state harmless in such work, are a threat to the security of the human race. Control of this technology by any group exclusive of the public is an effort to seize the arms of the 21<sup>st</sup> Century and monopolize those tools to limit the access of other persons to protection and relief.

The personal computer revolution demonstrated that private ownership and control over networks, technology, and private data separate from other authority gave rise to the greatest developments in 2000 years of human civilization.

How we can fail to see that in the next development or monopolize those technologies to exclude any group of people from the benefit of that technology is insanely stupid, as is the idea of selling such technology for its value as a weapon for less than a \$100,000 USD, is proof of the absurdity of society and some members of the public now fighting to overcome that work by force.

Delusional claims that RACCOON TECHNOLOGIES INCORPORATED is therefore not being honest in its performance or representation as a “hosting company” or “wholesale bandwidth reseller” or “dedicated server farm” like other business models, is incredibly duplicitous.

At no time has the firm ever stated it hosts clients without approval or screening, or that its products are available for public access or reverse engineering by very large competitors; and the effort to attack those products and right to work in order to compel surrender of such products and services is criminal.

Like SDP MULTIMEDIA GROUP, or MILITECH SYSTEMS, which do not disclose the actual contents of their computers and conceal most of the contents to prevent reverse engineering attempts and arbitrary price comparisons by malicious competitors – boutique technology services do not advertise what they do or are they required to produce a catalog of services to the public to enjoy status as a formally organized business operating in the full faith of the public trust. Companies organized in the United States are not “for profit slaves”, and such organization is a form of protection and governance to elect tax shelter benefits and conditions which are obligated – and in fact come with quite a few requirements that a “for profit” organization does not suffer in exchange for paying slightly higher taxes.

It is criminal fraud to suggest that posting a loss would impose a public duty on a company that is not a legal right reserved at law solely to its shareholders and equity owners and prior creditors; and to impair that right to work of the legal person duly made and commissioned in interference to obtain payment for a debt or disable such company by design of a competitor to create commercial advantage in the false claim, is racketeering activity barred by 22 U.S. Code Section 7102 “abuse or threatened abuse of the law”.

Citation of the Federal or State Statutory Code, or other Regulation, is not “Abuse”. Nor is citation of “criminal activity” done, where no stated indictment or direction to indicate a conviction is worked upon a person or punishment owing or due as if a conviction is worked; to give notice of the penalty for sustained effort to carry the illicit action after notice of its criminal nature is made publicly to warn or demand obligation to the law.

If a calculator can be taught to understand this, the failure of a human being to do the same is sub-A.I. in degree, and can only be a willful unlawful and criminal intent to violate the Statute on its production; barring a superior statute or order of a higher court – such as the Supreme Court of the United States.

## **PERSISTANCE AFTER STATUTORY WARNING IS CRIMINAL INTENT PROVEN**

To maintain claims therefore, in false allegations or other false account as a non-Party to a CONTRACT duly executed, or to report false information to knowingly misrepresent the parties or the labor relationship status (1099m) of a party, is fraud (18 U.S. Code §1341).

As is the practice of alleging the private, internal, or developmental goals of a company contrary to the product design a fraud activity in any degree where published as fact without consent of the owner.

“Merchantability and Fitness of Purpose” are guarantees at law, for which the legal right to designate or withhold such legal agreement as license is that of the owner; and falsification of such information is equivalent to issuance of a “fraudulent license” to impersonate the goods of another company.

As is the statement that such goods are not qualified or suited, where the “Fitness of Purpose” is not defined in contract to the public in written format or pledge duly made and maintained; a form of commercial fraud.

One cannot “imagine, speculate, or imply” that such goods fail such “GUARANTEE AT LAW”, although the right to discuss the use or personal experience as a “verified buyer of such goods” and “lawful entitled end-user” permitted license of use; for which people who have made false statements knowingly or the organizations for which they are contractors or associates in findings of the firm granting such license may refuse, restrict, or deny based on “legal cause” by false legal name or other false claims, misrepresentation, or any theory at law which suggest intent to reverse engineer or steal or appropriate or transfer goods in violation of the laws of the United States or license of any product or service or intellectual property.

Parody does not protect this in actions by COMPETITORS OF RECORD or persons who are found to be agents of a COMPETITOR OF RECORD, and for this reason, most companies explicitly and formally “Declare their Competitors” to designate these rights explicitly at law in any anticipated dispute.

A competitor who acts in FALSE LEGAL NAME to evade these protections, waives all rights to any claims at law arising from such abuse of the CIVIL PROCESS, and exposes a criminal intent to commit felony commercial sabotage and/or commercial espionage in such conduct which interferes with a registered company; and as a contractor is proof of incompetency to hold the office in 1099m labor standing or as an officer of a competitor firm in W2 status where they engaged in prohibited practices.

Contact with family members of a business owner, officer, or Director to intimidate, menace, extort, or communicate any debt or any threat of civil suit not filed, or any direction of commercial use of property enjoined any similar claims implied conditional sought action is **criminal coercion**.

**As we saw October 5 2022, such demands served upon family members of Officers of RACCOON TECHNOLOGIES INCORPORATED to extort, and physical contact October 4 2022, and subsequent November 4<sup>th</sup> 2022 in 84 messages and January 13<sup>th</sup> in 20 messages and January 20<sup>th</sup> in 51 new messages, entitle such firm to declare their Competitors and cite the improper conduct by any agent of any such labor organizations whether organized or unregistered, per Oklahoma Constitution Article XXIII section XXIII-1A.**

TEK SYSTEMS, et al find themselves in this matter, because of Donald Jonathon Beal and his false claims.
